## Floor Cleaning and Maintenance

### Weekly Maintenance

Natural stone floors need to be cleaned  
1 - 2 times per week.

### Floor Cleaning Process

Dust mop and / or vacuum the floor to remove  
any surface dirt and grit.

If using a vacuum cleaner make sure the brush  
setting is down so the plastic/metal casing does  
not scratch the floor.

Place a cap full of 'Stone Soap' into your mop  
bucket, then pour in 10 ltrs of warm water, do  
not use hot water as it will cause the floor to  
streak.

Place the mop into the bucket containing 'Stone  
Soap' and wring out the mop so that it's damp  
ready to pick up the dirt.

Mop the floor in a figure of eight overlapping  
motion as you work backwards a line at a time.

Applying Stone Soap will help provide a water  
insoluble and dirt repellent floor surface and  
tops up any existing floor seals.

### Our Maintenance Process

Our experienced team will deep clean tiles  
and grout lines; diamond polish; powder polish  
and seal the floors to restore it's natural high  
polished finish.

It's very important to introduce a regular main-  
tenance plan to help protect and provide a  
long lasting and functional floor finish.

We recommend natural stone floors are cleaned  
and maintained every 12 months.

### Help Protect Your Floors

Install entrance mats to help reduce the amount  
of dirt and grit coming in from outside on shoes.

Install plastic or felt pads under furniture legs to  
prevent scratches.

Place plant pots on plastic bases to prevent deep  
stains and scratches.

Only use Ph7 neutral cleaners or liquid Stone  
Soaps on natural stone floors to clean and pro-  
tect the surface.

Blot up spills with paper towels, don't wipe as it  
will spread the stain.
